STACKLAB

Cube Series

Available Exclusively at Maison Gerard

The Cubes are made of Engineered Cementitious Composite (ECC) with a foam core to reduce weight. Their distinctive facades are the product of a casting process involving the use of a decommissioned pump pattern. They can be oriented on any of their six sides, together or apart, and can be used as both furniture and sculpture.

Dimensions

16" W x 16" D x 16" H
